

Project #1739 – Development of New Uses for Ontario Vegetables

Brief Description: The objective of this project is to investigate and develop non-traditional uses for vegetables grown in Ontario. Of particular interest in this research is the use & production of marginal quality or excess production. This product is often sold at a reduced price because of quality, size and/or quantity on the marketplace. Some of the products to be investigated and developed are currently being made outside our province and are being imported here while others are not sold here at all. i.e. dried sauce mixes, vegetable purees. This project will research new products, packaging options and a marketing program initiated across Canada.
