

Project #8922

Powdery Mildew on Peas and Spinach

Researcher: Prof. Mary Ruth McDonald & Mike Celetti

Institution: University of Guelph

Duration of Project: May 15, 2006 – October 30, 2007

I. Brief Project Description

Poor powdery mildew control is a factor limiting yield in fresh market peas and spinach production in Ontario. Ontario's fresh vegetable growers need effective and economically sustainable management tools to be competitive in the global marketplace.

Additional funds to hire an extra student will enhance this project with more extensive data to be collected.

II. Project Objectives

To obtain efficacy data to support minor use registrations of specific fungicides: Tanos, Gavel, Reason & Alliette.

To improve the control of powdery mildew on fresh market peas and spinach.
