

**Project #9072  
Effect of Impact Herbicide  
Carryover on High Value Crops**

---

**BRIEF**

**DESCRIPTION**

The purpose of this study is to determine the sensitivity of five vegetable crops—tomato, cabbage, onion, carrots and cucumbers to topramazone (trade name Impact), a new herbicide that will be available to corn growers in 2007

**PROJECT**

**OBJECTIVE**

- To determine the effect of Impact (topramazone) residues on the emergence, growth and yield of tomatoes, cucumbers, onions, carrots and cabbage one year after applications.
- To transfer information to growers through extension meetings and farm press articles
- Determine the effect of soil type on the effect of Impact (topramazone) residues on the emergence, growth and yield of tomatoes, cucumbers, onions, carrots and cabbage one year after application.
